

Senators,

I've attached graphs I constructed showing teenage crash statistics from 2010 – 2019 (most recent official numbers). The graphs show the percentage of teen car crashes out of all car crashes in the state, the number of crashes that are property damage only versus leading to injury versus leading to death, and the total number of teenage car crashes with the number of individuals injured or dead from the crashes.

Please let me know if there are any questions.

Thanks,

**Matthew Willis, MPA**
